

ACTIONS IN REDUX

Presented by Group 4

WHAT ARE ACTIONS ?

- Actions are plain JavaScript objects.
- They describe what happened in the app .
- They are the only way to send data to the Redux store.

STRUCTURE OF ACTION

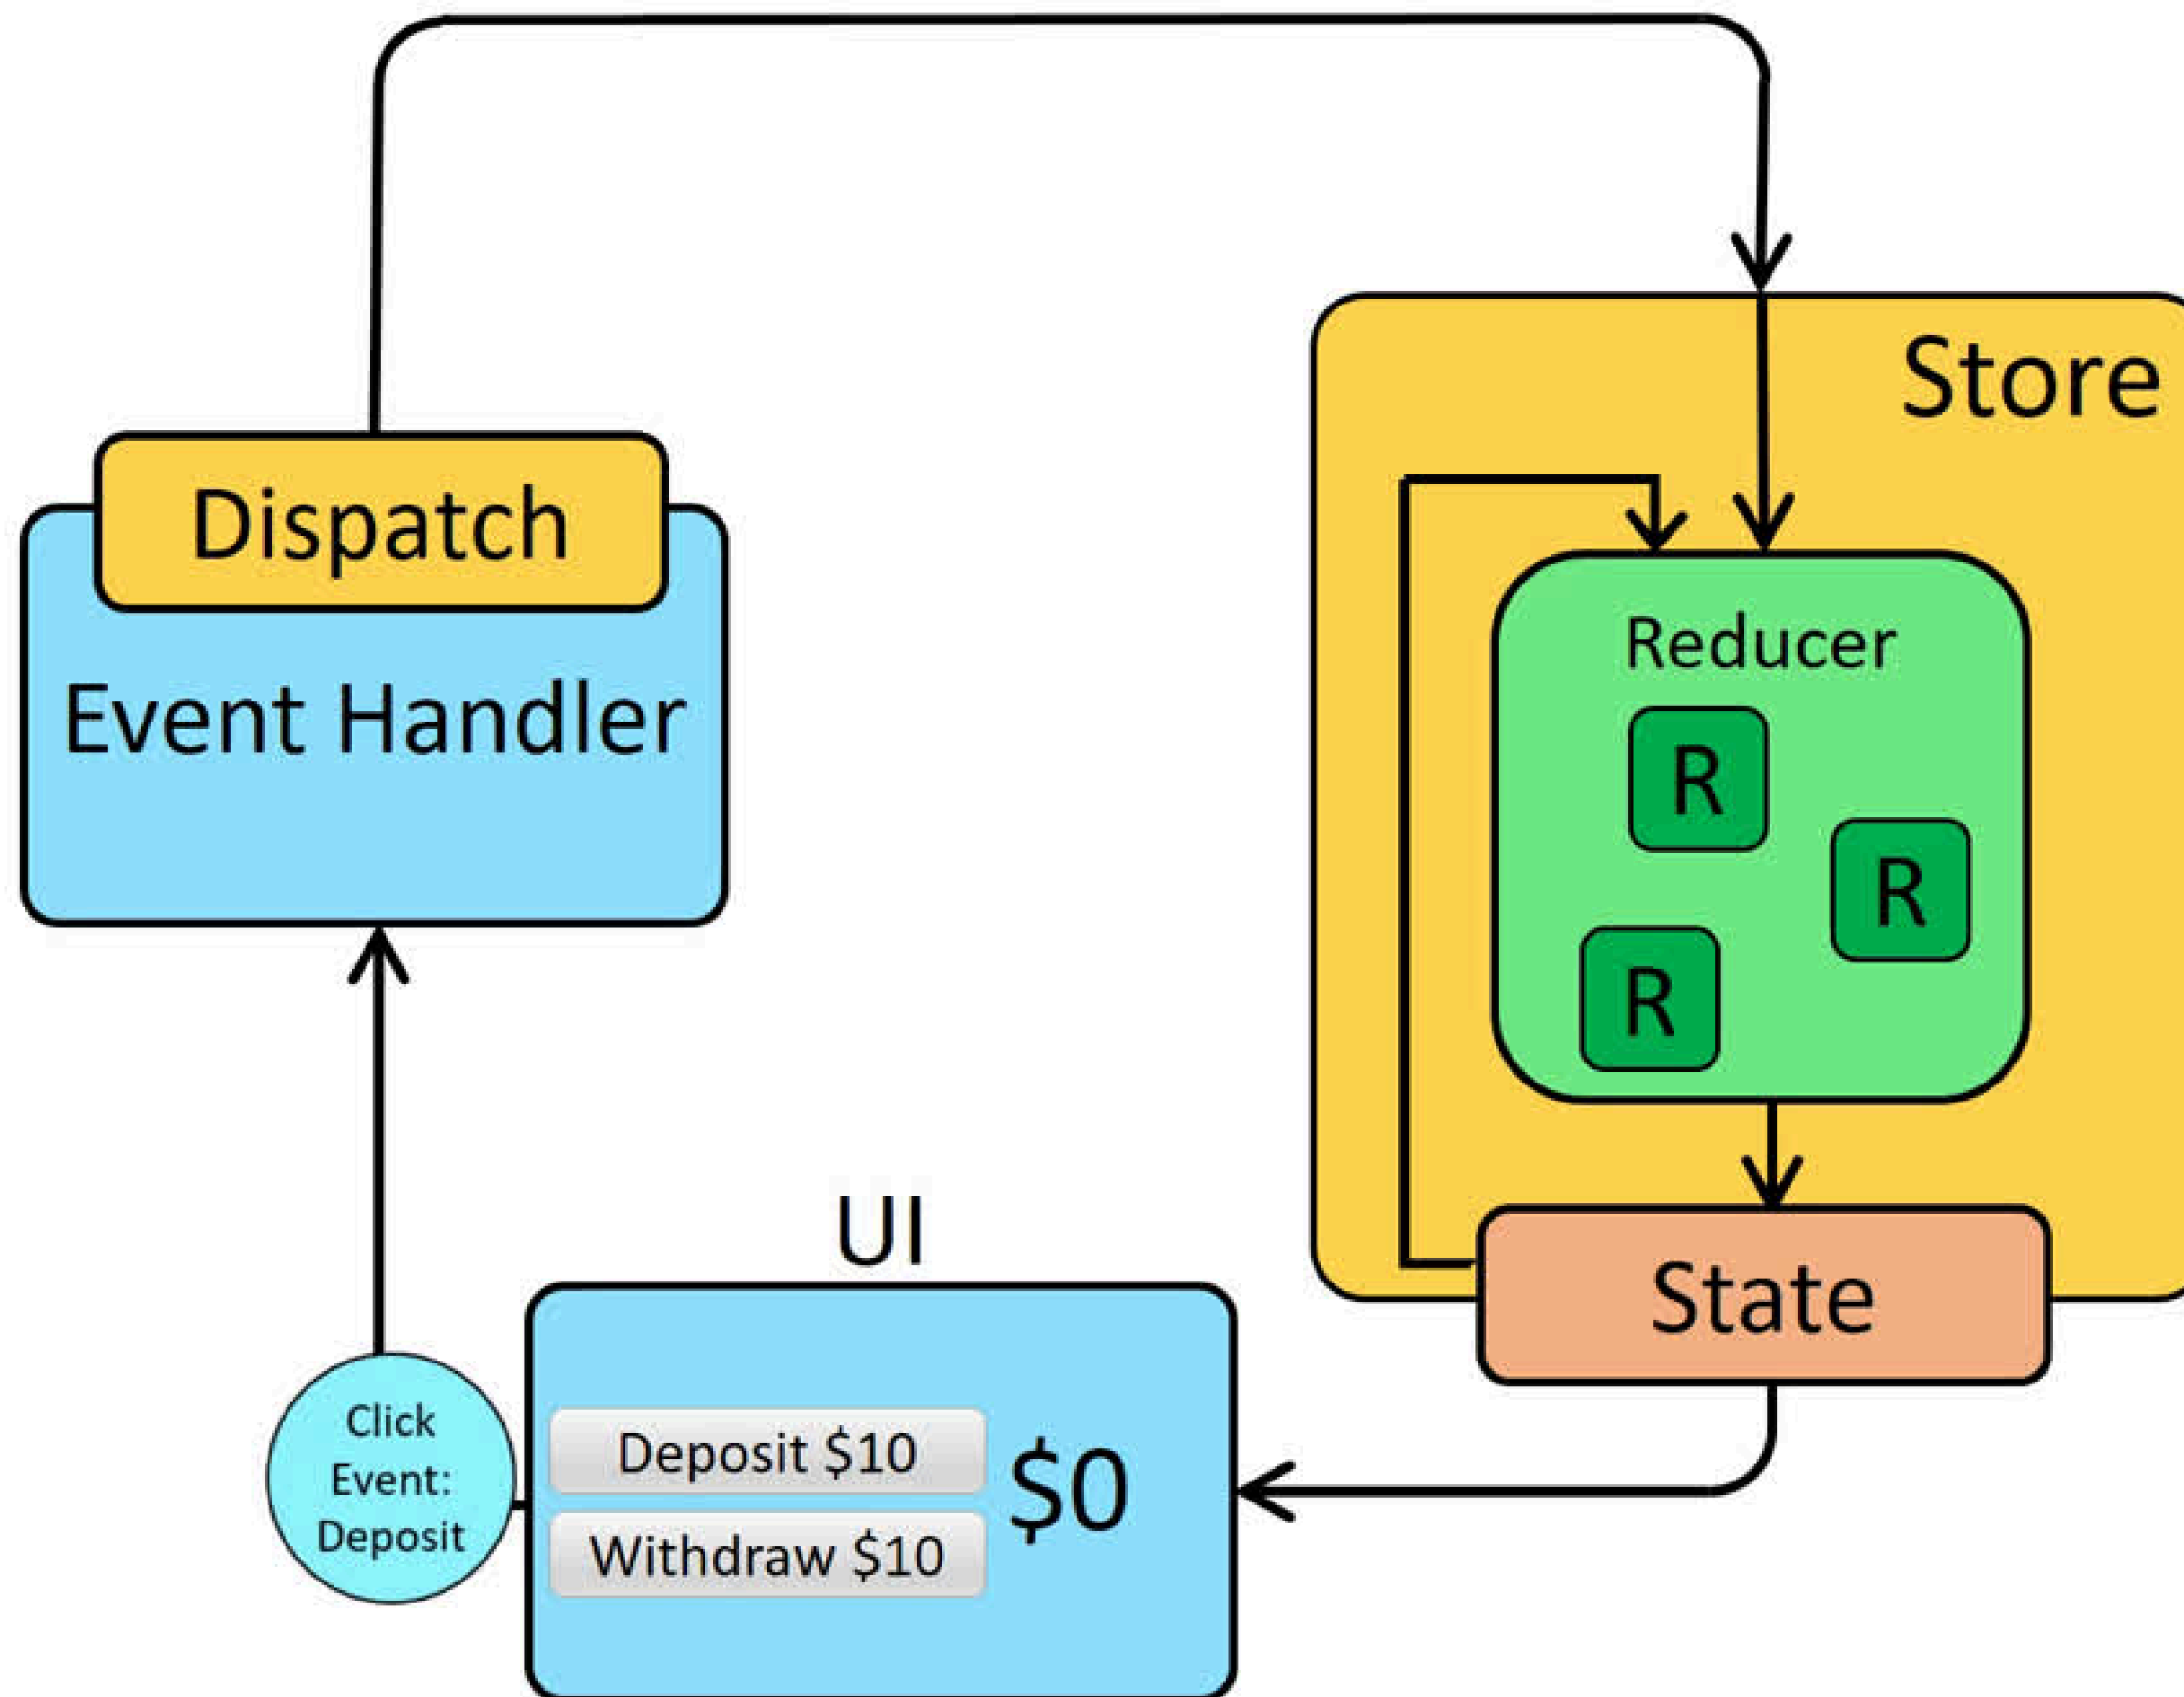

- type (required): A string describing the action .
- payload (optional): Data associated with the action .

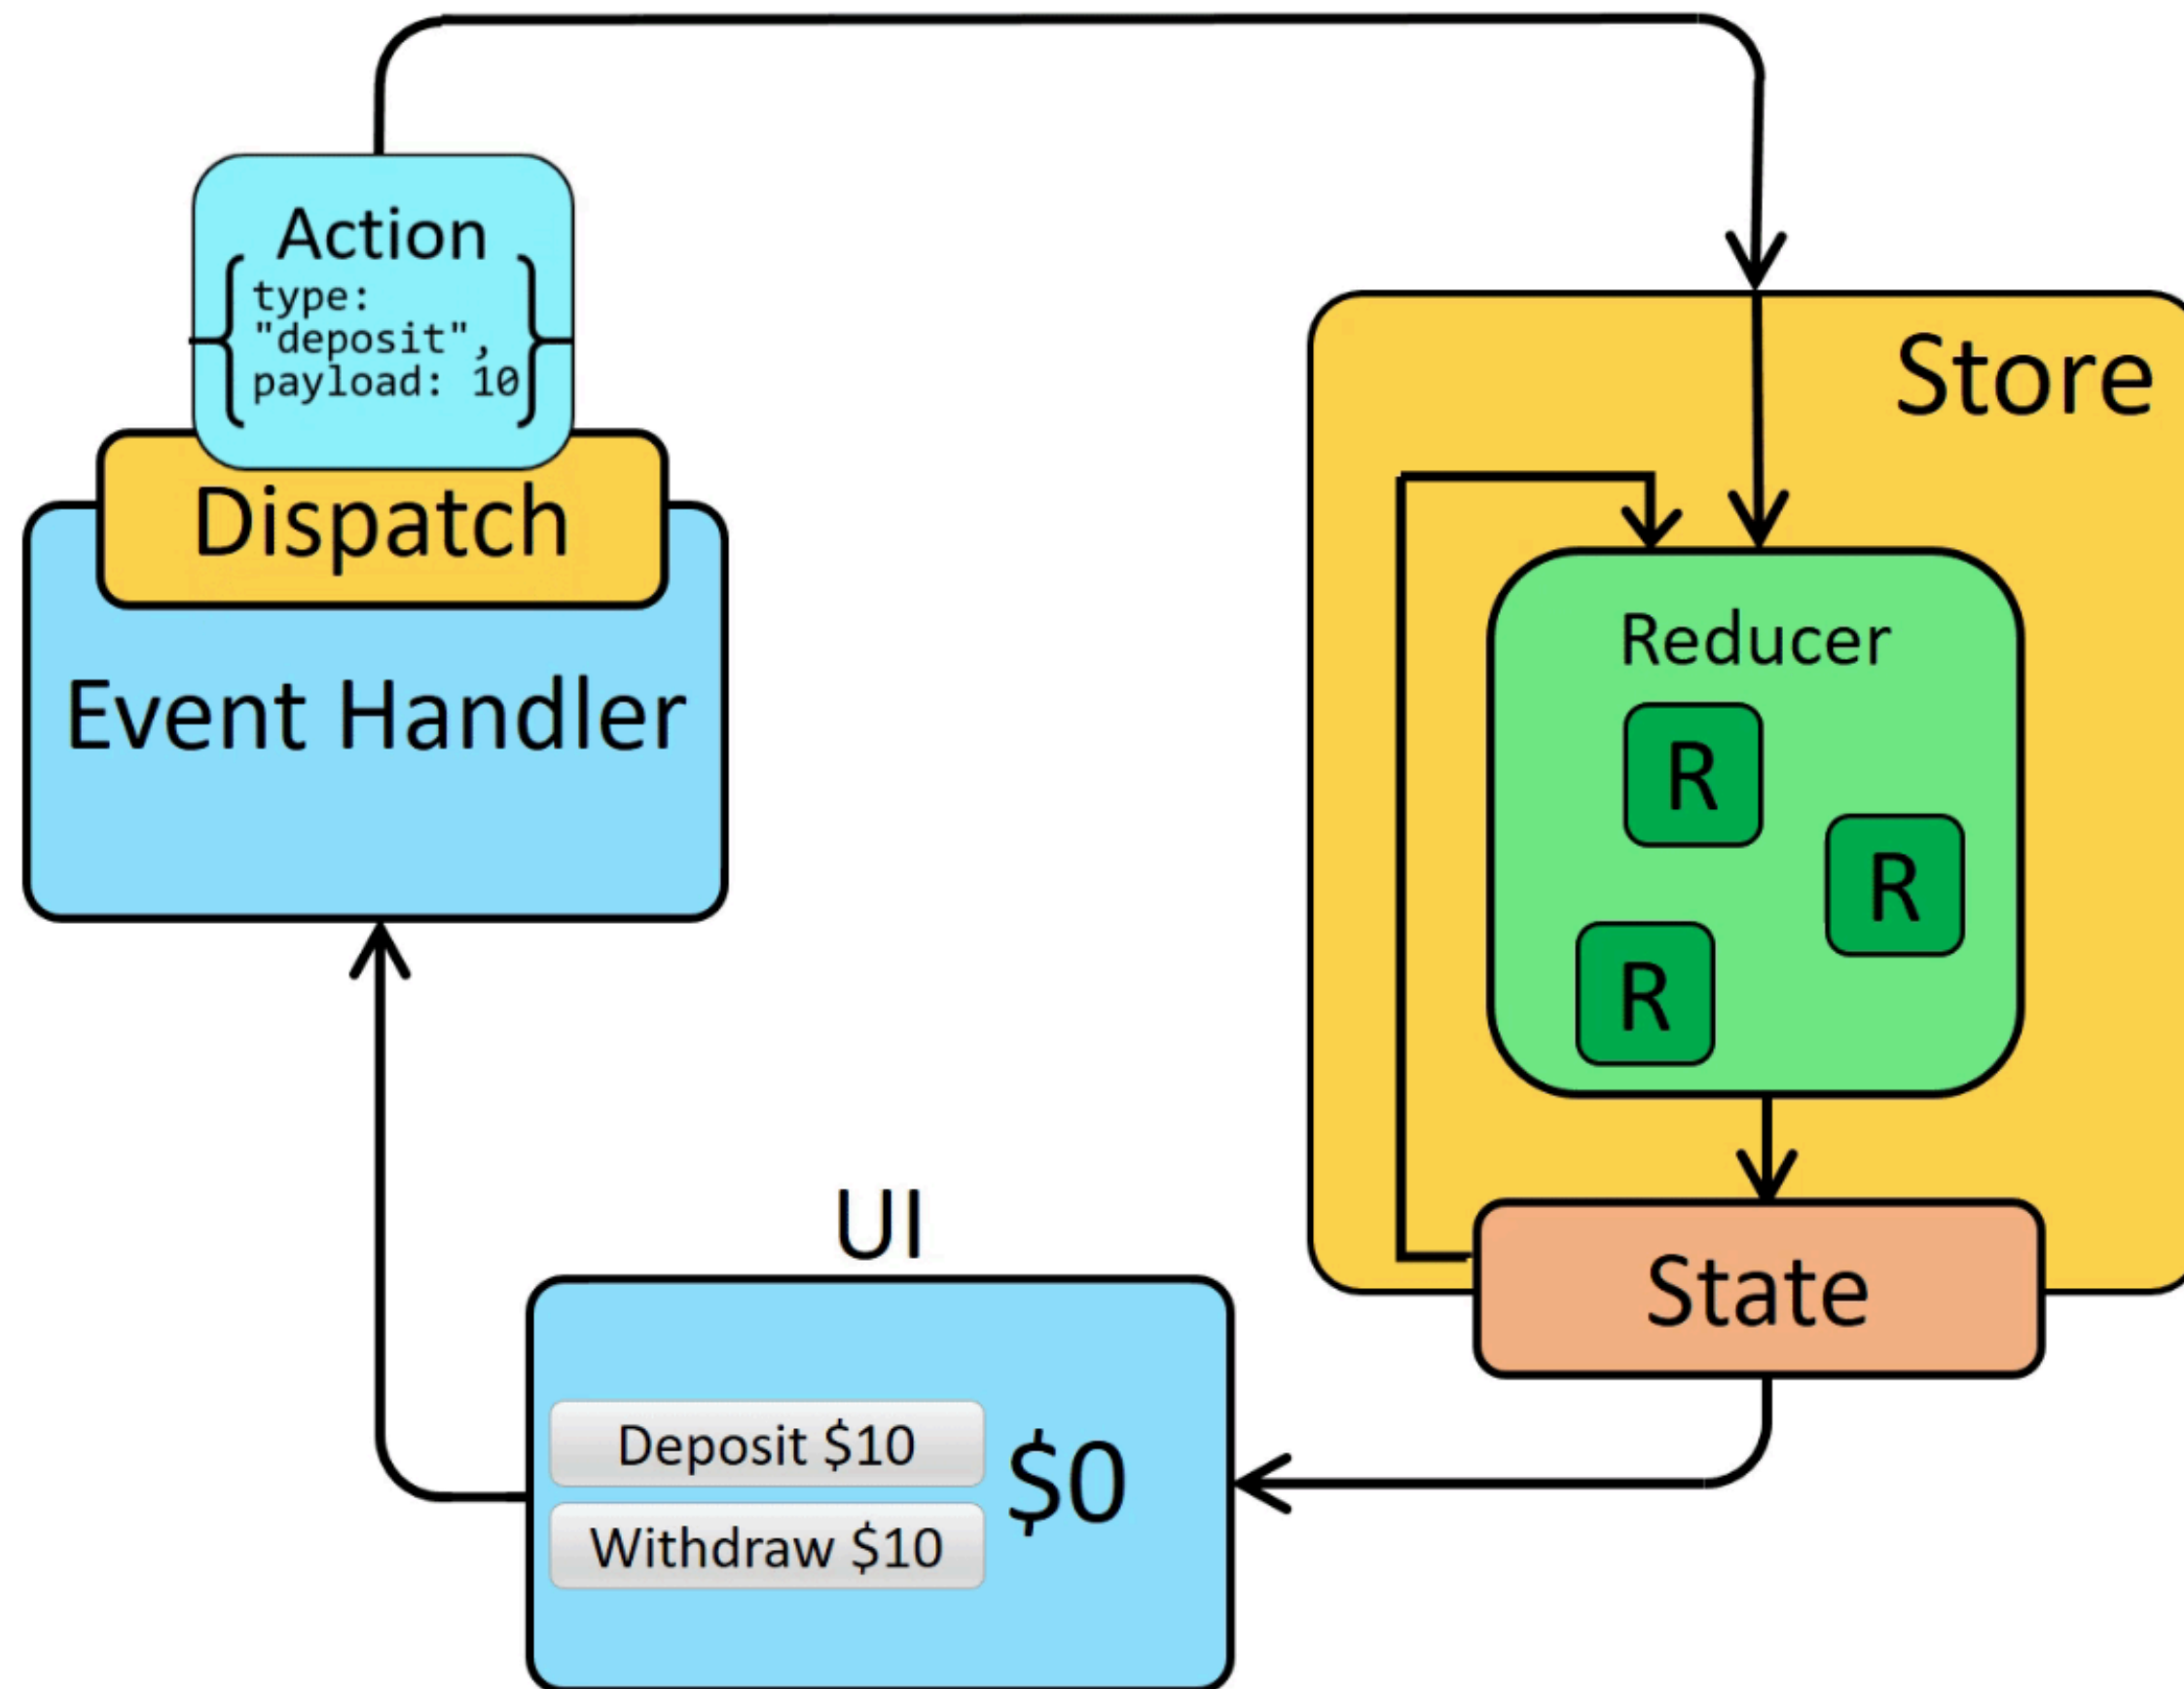

ACTION CREATORS

- Functions that create and return action objects.
- Simplify the process of creating actions.

DISPATCHING ACTIONS

- Use `store.dispatch(action)` to send actions to the store.
- The store passes the action to the reducer to update the state.

**THANK
YOU**
